

ABSTRACT OF THE DISCLOSURE

2 Methods, systems, and computer program products for customizing content based on
3 at least one operating characteristic of a mobile client. A mobile gateway receives content
4 from a content source, such as an email server, a Web server, or some other content server.
5 For example, content may include email, calendar, contact, task, Web, notification,
6 financial, sports data, configuration information, etc. The mobile gateway customizes the
7 content based on transforms assigned to each mobile client. Transforms account for
8 differences in the software, display, processor, memory, communication channel, and the
9 like, of each mobile client, without imposing additional processing burdens on the content
10 server. Processing that is common among several transforms may be shared. Mobile clients
11 may be any type of computer, including telephones, pagers, PDAs, laptops, and other mobile
12 gateways.
